

Discover the X – The nutrition
system for performance

THE NEW GENERATION OF CAVALOR SPORT FEEDS

FEEL THE DIFFERENCE? IT STARTS IN THE FEED.

ENERGY IS NOT JUST ENERGY

Every horse needs energy: to perform, recover well, and stay healthy. But not every source of energy works in the same way. If energy is released too quickly, your horse may become tense or excitable. If it is released too slowly, performance can suffer. The real difference lies deeper: in how your horse absorbs energy and keeps it in balance.

And that starts in the gut.

MEET THE X

Good nutrition for a sport horse does more than simply provide energy. It supports the body from within, helping the horse stay healthy and perform at its best. It is from this vision that Cavalor developed **OPTIMAL X**: the nutritional concept behind the Cavalor sport feeds.

STRONG & HEALTHY GUT

Microbiome (biotics) and gut support, especially relevant under high-intensity training and stress.

STRONG & HEALTHY GUT

TAILORED VITAMINS & MINERALS

SMART STARCH

SMART STARCH

Highly digestible sources, focus on safe starch for effective fuel without compromising on digestion and health.

TAILORED VITAMINS & MINERALS

Covering a broad base of nutrients, in the correct ratios and smart use of chelates when workload demands it.

THE SECRET OF EXTRUDATES

- ✓ Improved digestibility of nutrients
- ✓ More volume – more chewing
- ✓ Helps reduce the risk of gastric and intestinal problems

NEW RECIPE!

Cavalor Pianissimo is a level 1 feed for sensitive horses.

PIANISSIMO

Cavalor Pianissimo is a fibre-rich muesli for nervous sport horses. Formulated without oats and for horses with a sensitive stomach and gut. It contains long fibres which stimulate chewing and intestinal motility. The long fibres are timothy which is gentle on the stomach lining. Contains pre-, pro- and postbiotics for the development of a healthy intestinal flora. With puffed cereals and extrudates for easy digestion.

INNER BALANCE

- Magnesium
- Moderate sugar & starch level
- Fibers

SENSITIVE STOMACH AND GUT

- Soft timothy fiber
- Pre-, pro- and postbiotics (gut support)
- Highly digestible ingredients

NO OATS

EXTRUDATES FOR BETTER DIGESTION

- More chewing
- Highly digestible starch

Available in

Pianissimo

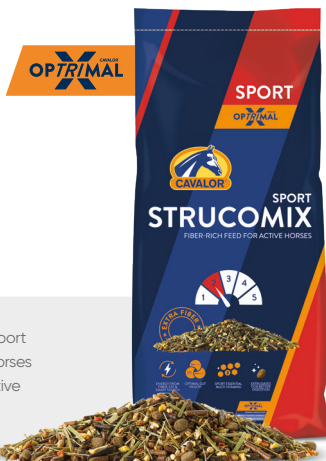

📦 Per 100 kg BW Min 400 g Max 650 g

20 kg | 550 kg (XL box)

STRUCOMIX SPORT

Fiber-rich feed for active horses

It contains long fibres which stimulate chewing and intestinal motility. Contains pre-, pro- and postbiotics for the development of a healthy intestinal flora, providing the basis for natural resistance. With puffed cereals and extrudates for good absorption and easy digestion. With essential multivitamins that supply the higher levels needed for horses that have to deliver serious performance.

Cavalor Strucomix Sport is a level 2 feed for horses receiving regular, active training.

Energy from fiber, fat & smart starch

Optimal gut health

Extra fiber

Sport essential multi-vitamins

Extrudates for better digestion

Available in

Strucomix Sport

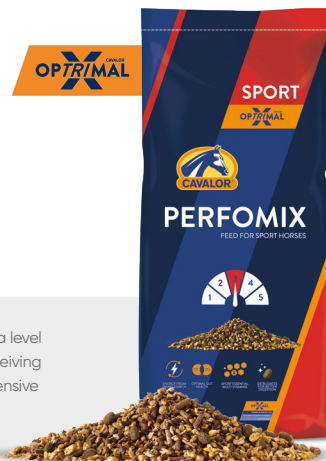

Per 100 kg BW Min 350 g Max 550 g

20 kg | 500 kg (XL box)

PERFOMIX

Feed for sport horses

With puffed cereals and extrudates for easy digestion and probiotics and postbiotics to support optimal gut function, the foundation for natural resistance. With essential multivitamins that supply the higher levels needed for competition horses. B-complex vitamins play a key role in energy management.

Cavalor Performix is a level 3 feed for horses receiving very regular and intensive training.

Energy from smart starch

Optimal gut health

Sport essential multi-vitamins

Extrudates for better digestion

Available in

Performix

Per 100 kg BW Min 450 g Max 750 g

20 kg | 550 kg (XL box)

NEW!

Cavalor Strucomix Performance is a level 3 feed for horses receiving very regular and intensive training.

STRUCOMIX PERFORMANCE

Cavalor Strucomix Performance is a fibre-rich muesli for active horses. It contains long fibres which stimulate chewing and intestinal motility. Contains pre-, pro- and postbiotics for the development of a healthy intestinal flora, providing the basis for natural resistance. With puffed cereals and extrudates for good absorption and easy digestion. With essential multivitamins that supply the higher levels needed for horses that have to deliver serious performance. B-complex vitamins play a key role in energy management.

› Energy from fiber, fat & smart starch

› Optimal gut health

› Sport essential multi-vitamins

WHICH SPORT FEED SUITS MY SPORT HORSE BEST?

Every horse is different: in training intensity and in how it feels while riding. That's why Cavalor developed the Levels: a practical guide to help you choose the right sport feed faster, tailored to your horse.

The Levels are based on two factors: **training intensity** and **rideability**. Rideability refers to how your horse feels while riding: does it have enough energy, does it stay focused, or does it feel too fresh, sharp, or explosive? Based on that, you can choose to go one **level up** or **down**.

◀ LEVEL DOWN

LEVEL UP ▶

Level 1

Leisure to light work or sensitive horses

Your horse is in light recreational work or has a lower energy need. This level also suits sensitive sport horses that do not need a higher energy intake. This also fits sensitive sport horses that do not need a higher energy intake.

Level 2

Trained regularly and actively

Your horse is worked regularly and actively. Think of amateur sport horses combining walking with regular dressage schooling, jumping or other disciplines.

Level 3

Trained very regularly and intensively

Your horse is worked very regularly and intensively. Think of sport horses combining walking or recovery work with consistent flatwork, jumping and dressage up to medium level, or other regular training sessions.

Level 4

Perform at top sport level where slow-release energy helps support sustained work

Your horse is in a high-level sport routine with a clearly demanding training load. Think of horses that train seriously and consistently for performance at a higher level within their discipline, where slow-release energy helps support sustained work.

Level 5

Perform at top sport level where more quickly available energy helps support peak effort

Your horse is in very intensive training or competition and carries a very high weekly workload. Think of horses performing at the highest level, where more quickly available energy helps support peak effort.
